

Ratiranjan Das

Frontend Developer (React.js)

✉ dasratiranjan65@gmail.com ☎ +91 6370295447 📍 Hyderabad, India

Profile Summary

Frontend Developer with **2.11+ years** of experience building scalable enterprise web applications and internal portals using **HTML, CSS, JavaScript, React, Redux and modern UI libraries**. Skilled in developing shared UI components, integrating REST APIs, and delivering responsive, accessible, and SEO-friendly interfaces. Strong collaborator with backend, QA, and design teams following web standards and best practices.

Technical Skills

Frontend Technologies:

ReactJS

JavaScript

Redux

HTML5

CSS3

AngularJS

Web Development

Library or Framework:

Git/GitHub

NetSuite

Sass/SCSS

Axios

Ant Design

Tailwind

Material UI

Others:

Performance Optimization

Accessibility (semantic HTML)

REST APIs Integration

Responsive Design

Work Experience

April 2023 – Present

1) FRONTEND DEVELOPER @ UnyKloud Technologies Pvt. Ltd.

📍 Hyderabad, India

Frontend/UI Developer with experience designing, developing, and maintaining scalable user-centric web applications for internal enterprise systems and client-facing platforms. Strong expertise in React.js, JavaScript (ES6), HTML5, CSS3, and modern UI libraries, with a focus on performance, reusability, and delivering a consistent user experience.

- Designed and developed modular, reusable UI components using ReactJS and JavaScript for multiple enterprise applications, ensuring UI consistency and faster development.
- Built and maintained an internal Employee Management Portal (EMP) to manage attendance, check-in/ exit, leave management, task planning, sprint planning, project assignments, and employee feedback.
- Integrated centralized state management using Redux to handle complex application data with predictable data flow.
- Developed interactive dashboards, sprint planners, calendar views, and task visualization modules for real-time employee and project tracking.
- Created dynamic, validated forms and integrated RESTful APIs with proper handling of loading states, errors, and edge cases to ensure stable UI behavior.
- Built responsive and accessible user interfaces using Ant Design and the internal UnyGC component library.
- Contributed to the development of an in-house UI component library (UnyGC) by building reusable components such as Drawer, Modal, Tables, Cards, Kanban View, Forms, Grid, and common UI controls.
- Developed and enhanced frontend features for a Property Management System (PMS), including property listings, tenant records, lease workflows, and role-based access control.
- Integrated Oracle NetSuite APIs to enable real-time synchronization of property and tenant data.
- The accessibility standards were enforced, conducted code reviews were performed, and the team collaborated with the backend and QA teams to deliver high-quality releases.

Projects

1) UNYGC : Unykloud Global Components

Jan 2024 – Dec 2024

Description : An in-house ReactJS based reusable UI component library developed to centralize and standardize customized user interface components supporting large-scale internal platforms used across the organization. The library was designed to ensure UI consistency, scalability, and faster development cycles by providing configurable, production-ready components that can be easily integrated into different projects and application screens.

- Developed a wide range of reusable and configurable UI components including Drawer, Modal, Tables, Tabs, Forms, Grid (Row, Col, Flex) Kanban View, Matrix Components, and application-specific modules such as Field History, User Notes, and System Notes, following modern React best practices for reusability, accessibility, and maintainability.
- Adopted a centralized UI library approach (UNYGC) to reduce code duplication, improve development efficiency, and ensure consistent UI behavior across multiple applications.

2) KENZO : Employee Management Portal

Jul 2025 - Dec 2025

Description : An internal system to track and manage employee day-to-day activities such as CheckIn, Attendance, leave, Tasks, project assignment, Performance reviews, and Employee Feedback.

- Built a secure employee portal using ReactJS and Redux, supporting daily operations for more than 70 employees.
- Developed dashboards and sprint calendar views to visualize tasks and ongoing work updates.
- Used Ant Design to create a responsive, user-friendly interface.
- Developed employee-facing features such as Check-In/Out, My Work, Tasks, Tickets, Calendar (Sprint Planner), Screens, and Wireframe modules to support daily and weekly work management.
- Built HR and attendance workflows including leave applications, leave entitlements, holiday setup, attendance logs, and employee feedback management.
- Improved internal process efficiency by reducing manual effort, standardizing workflows, and enforcing company policies through UI-driven controls.
- Worked cross-functionally with backend, QA, business analysts, and product teams to support feature delivery and workflow alignment.
- Implemented role-based UI access to differentiate functionality between employees, HR teams, and administrators.
- Developed admin and HR portals to manage company-level configurations such as company details, employee directory, laptop directory, IP address configuration, and customer and partner management.
- Enabled real-time visibility for admins and management by supporting monitoring of time entries, project data, deployments, and organizational activities through centralized dashboards.
- Developed dynamic forms for smooth employee data entry and management.
- Connected frontend components with backend services to render real-time data.
- **Tech Stack:** **UnyGC Library**, HTML, CSS, JavaScript, ReactJS, Redux, Git, GitHub, Postman API.

3) RIOO : Property Management System (rioapp.com)

April 2023 - Present

Description : A real-estate management platform to manage properties, tenants, and leasing operations for an organization.

- Developed frontend features to support property listings, tenant records, and lease operations.
- Implemented role-based UI rendering to control feature access for different user types.
- Integrated Oracle NetSuite APIs to enable real-time updates of tenant and property data.
- Implemented reusable table and filtering components to efficiently handle large datasets (more than 500 records) with improved rendering performance.
- Built reusable React components using React.js, and the **UnyGC Library**, to deliver smooth user interactions and enhanced user experience.
- Built and managed forms and workflows to support property setup, leasing, maintenance requests and interactions.
- Ensured seamless frontend-backend integration by handling API data mapping, validations, and state synchronization.
- Optimized code performance and user experience by reducing unnecessary re-renders and improving UI responsiveness for large datasets.
- Collaborated with product, backend, and QA teams to support custom workflows, configurations, and evolving business requirements.
- Focused on usability, consistency, and maintainability to deliver an intuitive and reliable enterprise-grade interface.
- **Tech Stack:** HTML, CSS, JavaScript, ReactJS, Redux, Oracle NetSuite, Git, GitHub, Postman API

Education

- **Bachelor of Technology (B.Tech)**
HIT, Bhubaneswar, Odisha

2019 – 2023

Certification

- **UI Full Stack Development :** Naresh IT, Hyderabad
(HTML, CSS, JavaScript, React)

6 Months
