

Ratiranjan Das

Frontend Developer (React.js) | [</> My Portfolio](#)

✉ dasratiranjan65@gmail.com ☎ +91 6370295447 📍 Bangalore, India

Profile Summary

Frontend Developer with **3+ years** of experience building scalable enterprise web applications and internal portals using **HTML, CSS, JavaScript, Typescript, React, Redux, Git and modern UI libraries**. Skilled in developing shared UI components, integrating REST APIs, and delivering responsive, accessible, and SEO-friendly interfaces. Strong collaborator with backend, QA, and design teams following web standards and best practices.

Technical Skills

Frontend Technologies:

ReactJS

JavaScript

Redux

HTML5

CSS3

Typescript

Next.js

Web Development

Library or Framework:

Git/GitHub

Bitbucket

Sass/SCSS

Axios

Ant Design

Tailwind

Material UI

Others:

Performance Optimization

Semantic HTML

REST APIs Integration

Responsive Design

Figma

Work Experience

April 2023 – Present

1) FRONTEND DEVELOPER @ Supersourcing (Client: Sevenloop Technology)

📍 Bangalore, India

Feb 2026 – Present (3 months)

- Developing frontend features for **Revind.AI**, a manufacturing ERP platform, using **Next.js** and **TypeScript** — including Work Order management with product-level grouping, quick status filters (Delayed, At-Risk, Overdue Tickets, In Planning), and production dashboards.
- Built a **Work Order List View** with dynamic group-by toggle (Product / Work Order), multi-field filtering (Product, Location, Order Type, WO Status, Route), and sortable data tables displaying Total Quantity, Overall Status, Open Tickets, and Customer/Partner details with visual progress indicators.
- Building reusable UI components from **Figma** designs within a **Mono Repo** architecture, ensuring consistent UI behavior.
- Managing version control via **Bitbucket** and collaborating on sprint planning and task tracking using **JIRA**.
- Tech Stack:** Next.js, TypeScript, ReactJS, Figma, Mono Repo, Bitbucket, JIRA.

2) FRONTEND DEVELOPER @ UnyKloud Technologies Pvt. Ltd.

📍 Hyderabad, India

April 2023 – January 2026 (2.10 Years)

- Frontend/UI Developer with experience designing, developing, and maintaining scalable user-centric web applications for internal enterprise systems and client-facing platforms. Strong expertise in React.js, JavaScript (ES6), HTML5, CSS3, and modern UI libraries, with a focus on performance, reusability, and delivering a consistent user experience.
- Designed and developed modular, reusable UI components using **ReactJS** and **JavaScript** for multiple enterprise applications, ensuring UI consistency and faster development.
- Built and maintained an internal **Employee Management Portal (EMP)** to manage attendance, check-in/exit, leave management, task planning, sprint planning, project assignments, and employee feedback.
- Integrated centralized state management using **Redux** to handle complex application data with predictable data flow.
- Developed interactive dashboards, sprint planners, calendar views, task visualization modules for real-time tracking.
- Created dynamic, validated forms and integrated **RESTful APIs** with proper handling of loading states, errors, and edge cases to ensure stable UI behavior.
- Built responsive and accessible user interfaces using **Ant Design** and the internal UnyGC component library.
- Contributed to the development of an in-house **UnyGC** component library by building reusable components such as Drawer, Modal, Tables, Cards, Kanban View, Forms, Grid, and common UI controls.
- Developed and enhanced frontend features for a **Property Management System (PMS)**, including property listings, tenant records, lease workflows, and role-based access control.
- Integrated **Oracle NetSuite APIs** to enable real-time synchronization of property and tenant data.
- Enforced accessibility standards, conducted code reviews, and collaborated with backend and QA teams to deliver high-quality releases.

Projects

1) UNYGC : Unykloud Global Components

Jan 2024 – Dec 2024

Description: An in-house ReactJS based reusable UI component library developed to centralize and standardize customized UI components supporting large-scale internal platforms used across the organization.

- Developed a wide range of reusable and configurable UI components including Drawer, Modal, Tables, Tabs, Forms, Grid (Row, Col, Flex), Kanban View, Matrix Components, and application-specific modules such as Field History, User Notes, and System Notes.
- Adopted a centralized UI library approach (UNYGC) to reduce code duplication, improve development efficiency, and ensure consistent UI behavior across multiple applications.
- Designed the library architecture to support configurable props and slot-based composition patterns for maximum flexibility across different project use cases.
- Maintained and versioned the component library and integrated it across multiple internal projects (KENZO, RIOO), significantly reducing development time.
- **Tech Stack:** ReactJS, JavaScript, HTML5, CSS3, Sass/SCSS, Git, GitHub.

2) KENZO : Employee Management Portal

Jul 2023 – Dec 2025

Description: An internal system to track and manage employee activities — Check-In, Attendance, Leave, Tasks, Project Assignments, Performance Reviews, and Feedback.

- Built a secure employee portal using **ReactJS** and **Redux** supporting daily operations for 70+ employees.
- Developed employee-facing features such as Check-In/Out, My Work, Tasks, Tickets, Calendar (Sprint Planner), Screens, and Wireframe modules to support daily and weekly work management.
- Built HR and attendance workflows including leave applications, leave entitlements, holiday setup, attendance logs, and employee feedback management.
- Developed admin and HR portals to manage company-level configurations — employee directory, laptop directory, IP address configuration, and customer and partner management.
- Implemented role-based UI access to differentiate functionality between employees, HR teams, and administrators.
- Improved internal process efficiency by reducing manual effort, standardizing workflows, and enforcing company policies through UI-driven controls.
- Worked cross-functionally with backend, QA, business analysts, and product teams to support feature delivery and workflow alignment.
- Enabled real-time visibility for admins and management by supporting monitoring of time entries, project data, deployments, and organizational activities through centralized dashboards.
- Developed dynamic forms for smooth employee data entry and management.
- Connected frontend components with backend services to render real-time data.
- **Tech Stack:** UnyGC Library, HTML, CSS, JavaScript, ReactJS, Redux, Git, GitHub, Postman API.

3) RIOO : Property Management System (rioapp.com)

April 2023 – Jan 2026

Description: A real-estate management platform to manage properties, tenants, and leasing operations.

- Developed frontend features to support property listings, tenant records, and lease operations.
- Implemented role-based UI rendering to control feature access for different user types.
- Integrated **Oracle NetSuite APIs** to enable real-time updates of tenant and property data.
- Implemented reusable table and filtering components to efficiently handle large datasets (500+ records) with improved rendering performance.
- Built reusable React components using **React.js** and the **UnyGC Library** to deliver smooth user interactions and enhanced user experience.
- Built and managed forms and workflows to support property setup, leasing, maintenance requests, and tenant interactions.
- Ensured seamless frontend-backend integration by handling API data mapping, validations, and state synchronization.
- Optimized code performance and user experience by reducing unnecessary re-renders and improving UI responsiveness for large datasets.
- Collaborated with product, backend, and QA teams to support custom workflows, configurations, and evolving business requirements.
- Focused on usability, consistency, and maintainability to deliver an intuitive and reliable enterprise-grade interface.
- **Tech Stack:** HTML, CSS, JavaScript, ReactJS, Redux, Oracle NetSuite, Git, GitHub, Postman API.

Education

• Bachelor of Technology (B.Tech)

HiTech Institute of Technology, Bhubaneswar, Odisha

2019 – 2023

Certification

• UI Full Stack Development : Naresh IT, Hyderabad (HTML, CSS, JavaScript, React, TailWind)

6 Months
